01 / THE IDEA

A world made brighter by learning.

An identity for children aged 5-9, with the clarity and care parents expect.

Play. Learn. Glow.

Purple brings the personality. Gold marks discovery. Turquoise opens the world.

02 / PERSONALITY

Curiosity leads. Encouragement follows.

Lumi is a companion who explores with the child, celebrates effort and makes trying again feel safe.

Playful

Expressive 2D characters.

Clear, responsive interactions.

Small moments of delight that support the lesson.

Thoughtful

Readable questions and calm content areas.

Meaningful progress.

Natural stopping points and a reassuring parent view.

Confident

A consistent purple-and-gold identity.

Simple, memorable silhouettes.

Friendly copy without baby talk or exaggerated promises.

What the brand should say

To a child: “I want to explore this.”
To a parent: “This feels clear, caring and worth my child’s time.”

03 / LOGO FAMILY

One name. A few clear roles.

Approved visual direction: Lumi interacting with the final “o”, paired with refined wordmark A.

PRIMARY / brand introductions and larger placements

APP ICON / launcher and avatar

Turquoise wink composition.

WORDMARK / navigation and compact branding

Use the right asset.
Keep the standalone wordmark for places where Lumi’s face becomes too small. The small-UI alternate uses a simple round dot.

Do not retype the custom wordmark in a font.

04 / LOGO HANDLING

Give the mark room to breathe.

Proposed production rules. Confirm sizes in the actual UI once vector masters and platform exports exist.

CLEAR SPACE / illustrative protection zone

Clear space
Let x equal the height of the lowercase “o”. Leave at least 0.25x beyond the outermost visible artwork on every side, including the crown and tail.

Minimum-size starting points
Integrated logo: 240 px wide.
Wordmark A: 120 px wide.
Small-UI alternate: 80 px wide.
These are test targets, not validated limits.

Preserve proportions

Scale uniformly. Keep the letters, face and tail in their approved relationship.

Keep it clean

Do not stretch, rotate, outline, recolor or add effects to the approved logo.

Check the background

Prefer calm light surfaces. Use an approved alternate for busy or dark areas; none exists yet.

05 / COLOR

Violet leads. Gold celebrates.

Exact sRGB implementation values. Generated illustrations contain slight color variation and have not been recolored.

Violet
#7651D6
118,81,214

Glow Gold
#FFD34E
255,211,78

Turquoise
#20C8C4
32,200,196

Soft Lilac
#B8A0F2
184,160,242

Fresh Aqua
#65E1D6
101,225,214

Play Coral
#F47B7F
244,123,127

Leaf Green
#43C59E
67,197,158

Ink Plum
#38234F
56,35,79

Warm Cream
#FFF4D9
255,244,217

Clear White
#FFFFFF
255,255,255

Lilac Mist
#F4F0FC
244,240,252

Quiet Slate
#6A6275
106,98,117

Text pairs: white on violet 5.36:1; plum on gold 9.65:1; plum on turquoise 6.65:1.
Use white/mist surfaces for parent views and cream/white for learning content. Supporting accents stay secondary.

06 / TYPOGRAPHY

Friendly headings. Clear learning text.

Recommended families for implementation. The wordmark remains custom artwork; it is not a downloadable typeface.

Nunito / headings

Use 700-800 for short titles and navigation emphasis. Rounded terminals echo Lumi’s shape language.

Keep long instructions out of heavy display styling.

Lexend / Latin UI

Use 400-500 for English and Bahasa Melayu instructions; 600 for choices and emphasis.

Test letter recognition with actual learning content.

Noto Sans Arabic

Use 400-600 for Arabic content. Respect right-to-left layout, shaping and diacritic clearance.

Get Arabic reading examples reviewed before release.

STARTING TYPE SCALE

Heading 32/40 px · Section title 24/32 px · Child instructions 20/30 px
Choices and buttons 18/26 px · Parent body 16/24 px · Metadata 14/20 px

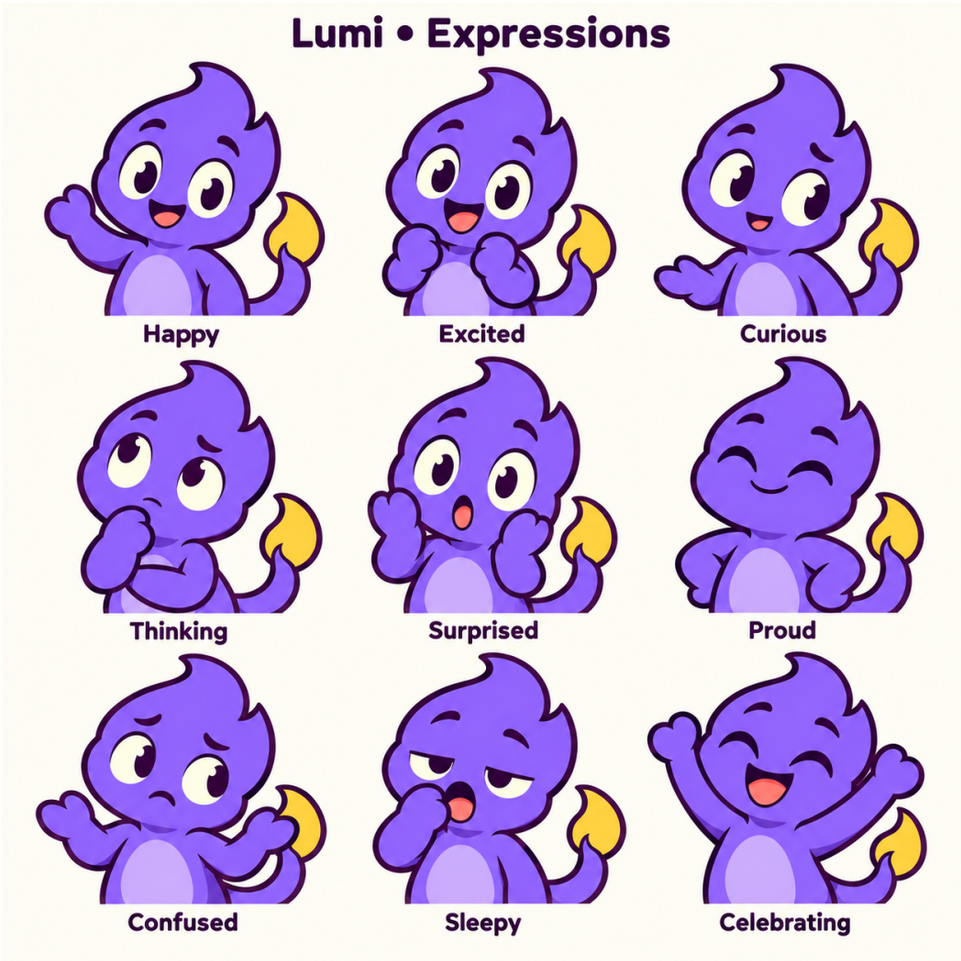

Use sentence case. Keep numerals unambiguous and use tabular figures only where supported and useful, such as score columns. Test 0/O, 1/l/I, 6/9 and mathematical symbols. Arabic line height and sizes require separate testing.

This PDF uses DejaVu Sans for document rendering; it does not show specimens of the recommended font files. Sources: [1]-[3].

07 / LUMI

A consistent character with real range.

Keep Lumi’s identity intact as the eyes, mouth, brows and gestures change.

Always retain
Swept flame crown, purple body, lavender belly, plum outline, rounded mitten hands and the attached golden-tipped tail.

Change with purpose
Use eyelids, brows, pupil direction, mouth shape, head tilt and arm gesture. Keep face scale and outline weight consistent.

Act with the child
Thinking helps explain a hint. Proud acknowledges effort. Confused belongs to Lumi exploring a tricky idea, never judging the child.

Pending: nine separate reaction images were requested but have not been generated. This sheet is a reference, not a sprite atlas or animation rig.

08 / ILLUSTRATION

Different worlds. One visual language.

Rounded geometry, clear silhouettes and controlled color blocking connect every learning area.

Number Kingdom

Maths

Geometric bridges, shapes and countable objects. Keep quantities exact.

Word Woods

English

Soft forest forms, signs and story objects. Letters remain readable.

Language Village

Bahasa Melayu

Everyday places, food and routines. Use locally familiar, reviewed examples.

Arabic Oasis

Arabic

Light, water and simple architectural forms. Review script and cultural context.

Logic Lab

Logic

Friendly machines and modular paths. Show cause and effect clearly.

Discovery Island

Science

Nature, weather and exploration. Keep learning diagrams factually accurate.

09 / MOTION

Quick responses. Gentle rewards.

Suggested timing ranges are starting points for prototyping, not completed animation assets.

Button press	**80-120 ms**	Compress slightly, release smoothly. Keep the hit area stable.
Answer feedback	**200-350 ms**	Use a brief pulse plus an icon and supportive text.
Panel transition	**220-320 ms**	One short directional move or fade; preserve orientation.
Lumi reaction	**500-900 ms**	Anticipation, expression, then settle. Avoid endless looping.
Milestone celebration	**800-1,200 ms**	One short flourish; do not block the next meaningful action.

Reduced motion: switch directly to the target state, or use a short fade. Retain all feedback in text and icons. No camera shake, strobing or mandatory celebratory delays.

10 / VOICE AND SOUND

Encouraging, never demanding.

The child should understand every action with sound off. Audio adds warmth; it carries no essential instruction alone.

Startup	Soft ascending three-note chime	0.5-0.8 s
Correct answer	Warm single pluck plus light bell	0.15-0.3 s
Try again	Soft neutral wooden tap; no buzzer	0.1-0.2 s
Reward / unlock	Short rising motif from startup theme	0.4-0.8 s
Transition	Quiet airy sweep	0.1-0.2 s
Lumi reactions	Brief “ooh”, “hmm”, “yay”; sparingly	0.2-0.6 s

Copy examples

Correct: “You found it!” · Retry: “Good try. Let’s look again.”
Hint: “What do you notice?” · Break: “Ready for a little break?”
Avoid harsh failure messages, guilt, or claims that Lumi is sad when the child leaves.

11 / PRODUCT EXPRESSION

The learning stays in focus.

These principles guide the upcoming UI concepts; they are not implemented screens.

Child experience

One clear task per screen. Large choices, short instructions and obvious progress. Keep decoration away from the question. Use 48 x 48 logical-pixel touch targets as a design starting point.

Parent experience

Calmer white and mist surfaces, plum text and purple controls. Show learning time, skill progress, strengths and practice needs in plain language. Keep charts labeled.

Accessible feedback

Use text + icon + color together. Design for sound off, reduced motion, text scaling and keyboard/focus access where relevant. Check RTL layout for Arabic. Normal-text pair checks use 4.5:1 [4].

Healthy rhythm

Make stopping and resuming easy. Celebrate learning rather than time spent. Avoid shame, lost-streak pressure or purchases inside child feedback flows. Place purchase decisions in parent mode.

12 / HANDOFF

A clear baseline for the build.

Approved design choices are distinct from unfinished production work.

Selected visual assets

Lumi body structure; wordmark A; integrated-o logo; turquoise wink app icon.

Use their approved folders. Earlier concept folders are history, not current defaults.

Still to produce

Nine individual reactions; full-body poses and animation rigs; vector logo masters; monochrome/white variants; adaptive icon exports; fonts, sound files and finished UI concepts.
