01 / THE IDEA

A world made brighter by learning.

For children aged 5-9, with the clarity and care parents expect.

Play. Learn. Glow.

Purple brings personality. Gold marks discovery. Turquoise opens the world.

02 / LOGO FAMILY

Lumi belongs inside the name.

Custom path lettering and an integrated final o. No font substitution or separate mascot lockup.

Primary
Integrated Lumi for introductions and larger branding.

Compact
Wordmark for navigation. Small-UI version uses a round dot.

Color variants
Color, black, white, plum and reverse color. Monochrome apertures remain transparent.

Clear space
At least 0.25 x the o height beyond all visible artwork. Preserve proportions.

Starting widths
Primary 240 px; wordmark 120 px; small UI 80 px. Previewed at these sizes; final thresholds need device testing.

03 / COLOR

Violet leads. Gold celebrates.

Exact sRGB tokens for new artwork and UI. Older generated PNGs have natural color variation.

Violet #7651D6 118,81,214	Glow Gold #FFD34E 255,211,78	Turquoise #20C8C4 32,200,196	Soft Lilac #B8A0F2 184,160,242
Fresh Aqua #65E1D6 101,225,214	Play Coral #F47B7F 244,123,127	Leaf Green #43C59E 67,197,158	Ink Plum #38234F 56,35,79
Warm Cream #FFF4D9 255,244,217	Clear White #FFFFFF 255,255,255	Lilac Mist #F4F0FC 244,240,252	Quiet Slate #6A6275 106,98,117

Text: white/violet 5.36:1; plum/gold 9.65:1; plum/turquoise 6.65:1.
White on gold or turquoise fails the 4.5:1 normal-text target. Use plum instead. Ratios apply to the exact solid tokens, not whole-product compliance.

04 / TYPOGRAPHY

Friendly titles. Clear instructions.

Font files, original licenses, CSS and an offline specimen are bundled.

Nunito

Display / 700-800

Short titles and navigation emphasis. Rounded forms echo Lumi without replacing the custom wordmark.

Lexend

Latin UI / 400-600

English and Bahasa Melayu instructions, choices and parent text. This PDF uses Lexend body text.

Noto Sans Arabic

Arabic / 400-600

Use correct shaping and RTL flow. Preserve diacritic space. See the offline Arabic specimen.

Your next adventure awaits

How many stars can you see? / Mari belajar bersama Lumi.

Title 32/40; section 24/32; child instruction 20/30; choice 18/26; parent text 16/24.
Arabic starts at 22/36. Test 0/O, 1/l/I, math symbols and text scaling in the target engine.

05 / CHARACTER

Simple parts. A recognizable friend.

Flat vector source and separated parts preserve the swept crown, rounded body and golden tail.

Keep the identity
Swept flame crown, cream eyes, purple body, lavender belly, plum contour and gold-tipped tail.

Editable anatomy
18 named parts: head, brows, eyes, pupils, mouth, torso/belly, arms, hands, legs, tail and flame.

Animation handoff
Closed shapes overlap at joints. The rig map specifies draw order, pivots and suggested parents. Individual parts share one coordinate frame.

Source format
SVG layers and a replayable motion study. Import and rig in your chosen engine; no native Rive, Spine or Lottie rig is claimed.

06 / REACTIONS

Nine ways to learn together.

Individual transparent PNGs, ready for static UI placement. They are not registered animation frames.

07 / MOTION

Respond, celebrate, then settle.

A finite wave/nod/tail study is included. Keep motion brief and the hit areas stable.

Press	80-120 ms	Small compression and release.
Answer feedback	200-350 ms	One pulse with supportive text.
Transition	220-320 ms	Short directional move or fade.
Lumi reaction	500-900 ms	Anticipation, expression, then settle.
Milestone	800-1200 ms	One flourish; never block progress.

Reduced motion: use immediate states or brief fades. No shake, strobe or endless rewards.
Open character/motion-preview.html to replay the 900 ms wave. Its CSS follows the system reduced-motion preference. Port the timing and pivots into the game engine.

08 / SOUND AND VOICE

Encourage without demanding.

Five original synthesized WAV cues are included as an initial sound palette.

Startup	0.80 s	Gentle rising three-note chime
Correct	0.30 s	Warm pluck with a light harmonic
Retry	0.18 s	Quiet neutral tap
Reward	0.75 s	Short rising discovery motif
Transition	0.18 s	Soft single-tone response

Copy that helps

“You found it!”
“Good try. Let’s look again.”
“What do you notice?”
“Ready for a little break?”

Playback rules

Separate effects and voice controls. Avoid stacked cues. No autoplay in previews. Mix and check loudness in the actual app. Human voice/narration is not included.

09 / APP ICON

A lively pose, across platforms.

The approved turquoise wink stays the default. Adaptive layers keep Lumi inside the mask-safe area.

iOS / store / web

Android adaptive

iOS
Opaque 1024px source and AppIcon asset catalog. Optional legacy sizes.

Android
Legacy densities, 108dp adaptive layers, v26/v33 XML and themed silhouette.

Web
Flame favicons; mascot touch/PWA icons and starter manifest.

The adaptive foreground was separated with image generation and has small contour differences. Pixel/export checks are complete; device masking, Xcode/Android compilation and store submission belong to app integration.

10 / PRODUCT EXPRESSION

One task, clearly presented.

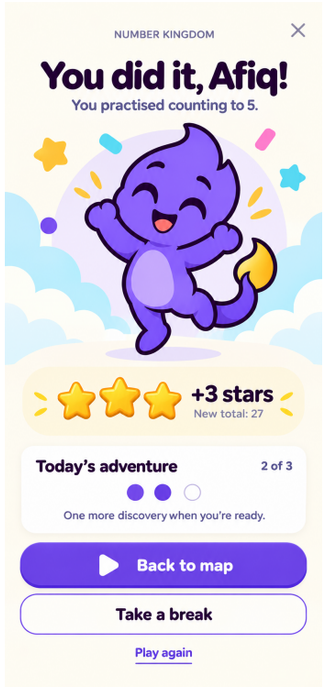

Four visual concepts connect the child adventure to calm parent oversight.

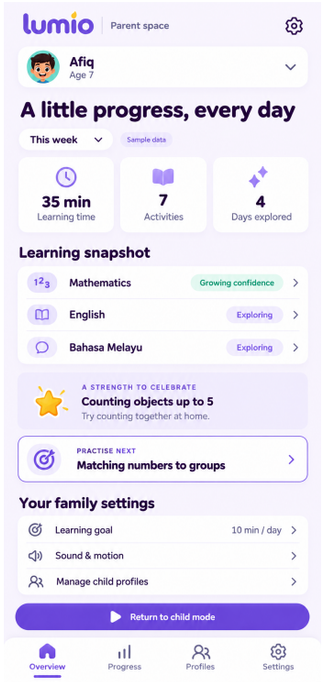

Adventure home

Counting activity

Activity complete

Parent overview

Use 56 x 56 logical-pixel child touch targets as a starting point. Pair color, text and icons. Support sound-off, reduced motion, text scaling, focus and Arabic RTL. Screens are visual concepts with fictional sample data.

11 / WORLDS

Different subjects. One visual language.

Rounded geometry, simple contours and purposeful color. Keep educational content accurate.

Number Kingdom

Mathematics

Countable objects, geometric bridges and exact quantities.

Word Woods

English

Story objects, soft forest forms and readable letters.

Language Village

Bahasa Melayu

Reviewed everyday places, food, routines and familiar language.

Arabic Oasis

Arabic

Accurate script, light and water; reviewed cultural context.

Logic Lab

Reasoning

Friendly machines and clear cause-and-effect sequences.

Discovery Island

Science

Nature and weather, with factually accurate learning diagrams.

12 / HANDOFF

A complete baseline for the next build.

Open START-HERE.html in the Lumio folder to browse current assets and previews.

Included in this package

Selected references and earlier concepts.
Editable logo family and flat Lumi layers.
Nine separate reactions and expression sheet.
Palette, bundled fonts and brand rules.
iOS, Android and web icon exports.
Motion study, five WAV cues and UI concepts.

Next: build the game

Add your game structure to game-structure/.
Choose engine and implement screens.
Import fonts, icons and character parts.
Create engine rigs and voice/content if needed.
Review language and educational content.
Test devices, accessibility and final mix.

Source of truth
Approved PNGs preserve chosen visual directions. brand/09-production contains new editable/export assets. V2 replaces V1 as the current guide; old notes describe earlier stages. No game logic, playable levels or native engine rig is implied.

References and licenses: complete URLs, font licenses, source metadata and implementation notes are included alongside the assets. Use MANIFEST.json to verify package files and SHA-256 hashes.
